Great Basin Priority Summary - Based on Most Recent 209's  
8/25/2020

[illegible]

## Evening Brief

Date: Tuesday August 25<sup>th</sup>, 2020

### Weather Summary

#### \*\*\* Mixed Wet & Dry Thunderstorms in the Northern Half of the Great Basin through Thursday \*\*\*

Significant lightning has occurred in central portions of the Great Basin into northern areas over the past 24-48 hours.

The 4-Corners high will weaken and flatten a bit by midweek as a weak low with drier air pushes into the northern California and Western Nevada, bringing an increase in southwest winds and drier weather to southern/eastern Nevada into western Utah Wed/Thu. Conditions will remain seasonably warm and dry most areas, but still chances of lightning Wednesday/Thursday across Idaho/Wyoming and dipping down into far northern Nevada/Utah. Isolated thunderstorm chances continue over the southern half of the Great Basin through late week into the weekend.

A strong cold front is expected to drop down from the north later this weekend and bring gusty northwest winds to much of Idaho and Wyoming into northern Nevada and northern Utah on Sunday. Smoke from California wildfires will continue to impact western and northern Nevada into Idaho at times as the southwest flow continues this week.

---

### Preparedness Levels & Great Basin Fire Activity (from WFDSS)

|             |      |  |
|-------------|------|--|
| Great Basin | PL 3 | Moderate to Heavy Initial Attack Activity                                      |
| National    | PL 5 | New Fires and Acres: 44 fires for 2,990 acres. 110 acres of large fire growth. |

---

### Fuels/Fire Potential

#### \*\*\*A Fuel/Fire Behavior Advisory in Effect for Eastern NN, Most of UT and Western Arizona Strip\*\*\*

Fuels in all regions, of all class sizes, have dried to critically dry fuel conditions. Recent precipitation in the Arizona Strip and southern parts of Utah/Nevada will take the edge off the critical fuels over the next 2 days or so. Fuels will briefly moisten by midweek across northern areas as well, but that will be short-lived as drier and breezy conditions move in late in the week and into the weekend across Idaho and Wyoming.

Another push of monsoonal moisture should bring some moistening conditions to eastern Utah and the AZ Strip later this week into this weekend. Live fuel moisture in the sagebrush has dropped to below 100% across most lower elevations, from the Snake River Plain southward into most of Utah, Nevada and the Arizona Strip, where sagebrush moisture is breaking records, 50-60% in several stations, supporting Extreme Fire Behavior. Across the Central Idaho Mountains into Western Wyoming heavier dead fuels have dried to normal late summer levels, with the increased threat of lightning fires.

## Resources:

### Aviation within the Great Basin

- 1 VLAT, 3 LATs / 2 CL 215
- 25 SEATs, 11 AA, 1 ASM
- 9 Type 1 Helicopters / 6 Comm.
- 11 Type 2 Helicopters / 7 Comm.
- 20 Type 3 Helicopters / 11 Comm.

### Crews Committed within the Great Basin

- 12 IHCs / 0 Available
- 10 Type 2IA / 1 Available

## Current Incident Details
